Core Skills:

Java | Python | REST API | JavaScript | SQL | React.js | Databricks | Flask | Docker | Airflow | Quarkus |
AWS Certified Solutions Architect – Associate

Professional Experience:

Associate Software Engineer, Data: EquiLend, Canary Wharf

Aug 2025 – Present

- Architected and deployed 10+ Airflow ingestion pipelines on Databricks, automating raw data processing and enabling reliable, production-ready analytics datasets.
- Built an ETL pipeline using Airflow and Databricks to integrate Salesforce and database data, automating revenue calculations and improving accuracy.
- Engineered robust ingestion pipelines to scrape and ingest daily reference rates from the New York FED website, providing critical real-time data for downstream financial applications.
- Integrated ServiceNow incidents records data into Delta Lake via API, supporting data-driven insights and operational reporting

Graduate Technology Analyst: EquiLend, Canary Wharf

Sep 2024 – Jul 2025

- Developed Java REST endpoints on the Quarkus framework using Mutiny for reactive programming.
- Refactored the REST API codebase to improve code quality and optimize PostgreSQL JSON queries with JSONB functions, resulting in cleaner architecture and better query performance
- Implemented custom metrics using Micrometer to enable observability across 6 microservices, integrating with Prometheus and Grafana for enhanced monitoring and insights.
- Refactored a monolithic stored procedure into two separate procedures to resolve stale security prices, ensuring up-to-date data display and improved performance.
- Provided technical support for client queries on company's trading/post-trade applications across web, MQ, and API channels.

Software Engineering Intern: NCR Corporation, Paddington

May 2023 – Aug 2023

- Developed a data import tool using Java to streamline the generation of import files for the database, significantly improving the efficiency of performance testing.
- Conducted comprehensive testing of the company's software installation process in a Linux environment, ensuring seamless deployment and functionality.
- Gained proficiency in Agile practices, including user story creation, sprint planning, and regular retrospectives, while collaborating with a diverse team of software engineers, QA testers, and product managers.

Demonstrator: Queen Mary University of London

Jan 2023 – April 2024

- Explained concepts to students, aiding in enhanced understanding of topics.

Education:

BSc (Hons) Computer Science (First Class), Queen Mary University of London

Sep 2021 – July 2024

Relevant Modules:

Deep Learning & Neural Networks | Big Data Processing | Software Engineering | Computability & Algorithms

A-level, City & Islington Sixth Form College

Nov 2019 – May 2021

Mathematics (A) | Electronics (A*) | Computer Science (B)

Projects:

Movie Recommendation Web App: React.js | Flask | Python (Final Year Project)

- Designed and implemented a recommendation system using NLP techniques, exposing results through a Flask API and React frontend.

Weather App for Disabled people: React.js | JavaScript | HTML | CSS (Group Project)

- Collaborated with a team of four students to develop a user-friendly weather application using React.js and APIs, designed specifically to cater to the needs of disabled individuals.

Block Puzzle - Sudoku styled game: Java

- Designed and implemented a Blockudoku-inspired puzzle game, integrating complex game logic that combines elements from Tetris and Sudoku.
- Implemented the game using MVC architecture for better code structure and maintainability.

Extra-curricular activities:

Co-head of Electronics, Queen Mary Formula Student Society

Nov 2021 – Nov 2022

Digital Ambassador, City & Islington College

Nov 2019 – May 2021
